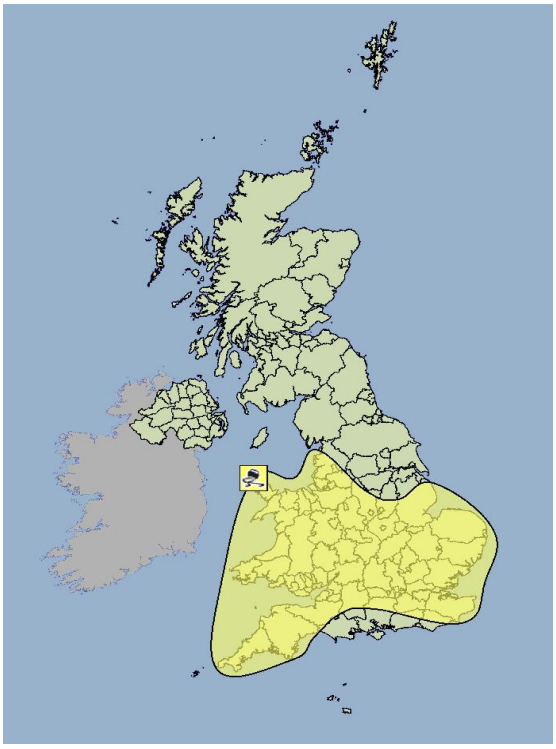
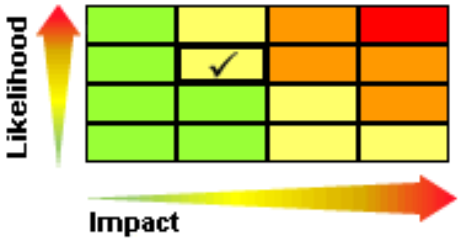
National Severe Weather Warning Service





Chief Forecasters Assessment
Earlier rain, sleet and snow across eastern England will clear late on Wednesday afternoon with icy patches expected to readily develop through the evening on untreated surfaces. Melting snow across central and southern England on Wednesday afternoon will also lead to some icy patches redeveloping overnight. Scattered wintry showers will also affect western areas which may wash off previously treated surfaces. 1-2 cm of snow may accumulate above around 200 metres where showers do fall.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **16:00 on Wed, 27th Dec 2017** until **11:00 on Thu, 28th Dec 2017**

Icy patches are expected to develop on Wednesday night and Thursday morning on some untreated roads, pavements and cycle paths, as well as where showers continue to fall washing off treatment.

Some injuries from slips and falls on icy surfaces are possible.
